

## HMP & YOI Doncaster :- Carbon & Environmental Policy Statement

At HMP & YOI Doncaster we aim to manage our activities, services and estate in an environmentally responsible manner. This will include being at the forefront of environmental performance in the Prison Sector.

The Prison is in a very sensitive location, being an island between two rivers and surrounded by valuable habitat. As such it has potentially significant impact on the wider environment as a large consumer of materials, energy, water and producer of waste.

We are committed to a reduction in environmental impact through pollution prevention, sustainable procurement, waste minimisation and energy and resource efficiency.

We are also committed to manage, measure and record our carbon output and reduce emissions where possible through energy efficiency & waste minimisation.

We will meet the requirements of our customers and, where reasonable and practicable comply with their environmental policies. Where possible we will also exceed all relevant legal environmental requirements.

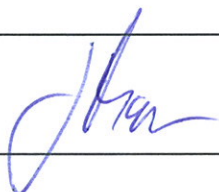

We will exercise a duty of care towards all persons and companies working directly for the company, to assist them in meeting the objectives of this policy.

It is our policy to continually improve our environmental performance through the setting of appropriate objectives and targets for environmental and carbon intensive resources, such as energy, water, waste, purchased goods and travel. Performance will be reviewed through the Management review system and a robust internal audit programme.

Managers will ensure that staff are informed and receive adequate awareness training to enable them to understand and appreciate their environmental responsibilities, and those of the company, and that tasks are only allocated to staff members capable of fulfilling these tasks in an environmentally responsible manner. Each and every individual is duty bound to act in an environmentally reasonable manner. No employee or sub-contractor shall knowingly commit any act which contravenes any environmental statutes.

We will achieve the above through a certified ISO 14001 system.

Signed for and on behalf of Serco

Director
